## Worksheet no. 1

Together with a group of residents, you want to implement the „Green Roofs in the City“ initiative to install green roofs on public buildings. It aims to improve the energy efficiency of public buildings, but also to increase biodiversity in the city.

Consider what institutions could become partners in this initiative and what they could bring to this partnership and possibly gain.

## Worksheet no. 2

Together with a group of residents, you want to implement a „Community Photovoltaic Project“ initiative to install solar panels on public buildings. It aims to reduce the city’s carbon footprint, but also to engage residents in sustainable energy practices.

Consider what institutions could become partners in this initiative and what they could bring to this partnership and possibly gain.

## Worksheet no. 3

Together with a group of local residents, you want to implement the „No plastic in the suburbs“ initiative. It aims to reduce the use of single-use plastic in your small local community.

Consider what institutions could become partners in this initiative and what they could bring to this partnership and possibly gain.

## Worksheet no. 4

Together with a group of local residents, you want to implement a „Green Transport“ initiative to introduce environmentally friendly buses and implement energy-saving practices by the city’s transport operator. The initiative aims to reduce greenhouse gas emissions from public transport.

Consider what institutions could become partners in this initiative and what they could bring to this partnership and possibly gain.

## Worksheet no. 5

Together with a group of local residents, you want to implement an „urban farming initiative“, the aim of which would be to transform selected areas of school facilities into community gardens and provide training in sustainable farming practices for students. It is designed to promote local food production, but also to provide educational opportunities for students.
